About

I am a data science and scientific computing expert, with a strong scientific & high performance computing background, and 7 years of machine learning / deep learning experience. I am also a holder of a Ph.D. on Machine Learning for Structural Health Monitoring, with original contributions on use of deep learning and generative ML in predictive maintenance. My overall organizational impact, both during my academic tenure and within Deloitte, is in fostering maintainable and modular software engineering practices, solid DevOps practices, and an inclusive culture of collaboration, continuous learning, and excellence.

Work Experience

SEPT 2024–CURRENT **Deloitte** Assistant Manager

- Developed a data-driven methodology for improving the effectiveness of compliance monitoring using machine learning (Pharma client).
- Co-developed an offering for AI in energy trading as senior subject matter expert and significantly contributed to the winning pitch, which led to the acquisition of a new client.

FEB 2022–SEPT 2024 **Deloitte** Senior Consultant

- Facilitated communication with client stakeholders of varied seniority in a critical and dynamically evolving project, as part of the financial risk reporting standards alignment team during the merger of two global systemically important banks. My impact resulted in introducing sound DevOps and coding practices, improving accountability & ownership, code maintainability, and automation of manual processes, which in turn reduced operational risks, and resulted in early delivery with increased efficiency.
- Developed machine learning techniques for money laundering risk estimation.
- Implemented and benchmarked a deep learning-based in-house diarization (speech processing) system for the compliance department of a large swiss bank.
- Gained hands-on experience in financial risk management (low-default portfolios default risk estimation, portfolio theory, liquidity and leverage regulatory reporting).

SEPT 2016–NOV 2021 **ETH Zurich** PhD Candidate/Research Assistant

- Performed research on scalable probabilistic machine learning for structural condition monitoring of wind turbines and wind farms (Python, TensorFlow)
- Implemented a message-passing GNN library (<https://github.com/mylonasc/tf-gnns/>)
- Engaged in industrial collaborations (raw data curation, deep learning for remaining useful life prediction, wind farm data processing)
- Awarded with no corrections on first submission, and nominated unanimously from examination panel for the ETH Medal.

DEC 2015–SEPT 2016 **ETH Zurich** Research Assistant

- Implemented advanced statistical learning algorithms (high-dimensional regression with tensor decompositions), including original automated model selection pipelines (Matlab),
- Implemented and tested uncertainty quantification algorithms,
- Developed a full-stack web interface to sensitivity analysis and regression module (PHP, JavaScript, Matlab)

JUL 2014–DEC 2014 **Credit Suisse** Full-Stack Trading Tool Developer (internship)

- Implemented and validated a high level interface for an option pricer (C++, R)
- Implemented a RESTful timeseries server and a scriptable front-end visualization trading signal identification tool (Python, JavaScript, MySQL)

Education

- SEPT 2016 – SEPT 2021 **ETH Zurich**
Ph.D. in MACHINE LEARNING FOR STRUCTURAL HEALTH MONITORING UNDER UNCERTAINTY
Advisor: Prof. Eleni Chatzi
- SEPT 2012 – SEPT 2015 **ETH Zurich**
M.Sc. in COMPUTATIONAL SCIENCE AND ENGINEERING
Specialization: Computational Electromagnetics
Advisor: Prof. Ralf Hiptmair

Technical Strengths

- Programming Languages** Python, Matlab, R ●●●●●●
C++, Java, JavaScript ●●●●○○
- Other software development skills** Linux, Docker, Kubernetes, Classical ML Algorithms, Scientific Computing, Software Design, Web Development, High Performance Computing, Retrieval Augmented Generation systems, Microcontroller Programming
- Deep Learning** Probabilistic Generative Models (GANs, VAEs, Normalizing Flows, Denoising Diffusion models), Graph Neural Networks, Strong familiarity of all core Deep Learning architectures (gated RNNs, CNNs, Attention Mechanisms & Transformers) and how they apply to different data modalities (text, audio, images, tabular data).

Other information

Teaching assistant roles

- High Performance Computing for CSE (C++, OpenMP) (2020) (Prof. O. Schenk)
- Method of Finite Elements (Matlab, Python) (2017 – 2019) (Prof. E. Chatzi)

Other academic engagements

- *Mentorship*: Serving as mentor for Ph.D. students at ETH Zurich (upon invitation).
- *Student project supervision*: 6 MSc theses and semester projects and consulted on several others.
- *Reviewer assignments*: for Mechanical Systems and Signal Processing and Journal of Sound and Vibration.

Distinctions and Certificates

- **Best paper award** in 39th IMAC conference (Feb. 2021)
- **SIAM Gene Golub Scholarship** for PhD summer school on “*High-Performance Data Analytics*” Aussois, France 2019
